The realized loss in the 2016 was made because of the assets cleaning – by issuing the value corrections for the loans, which have been repaid with delay (NPL). The mentioned loss is not the irreversible expense and it can be compensated by the loan repayment or the collateral selling.

The Bank estimates that in the period of the upcoming 2 years there will be at least 50% of the NPL paid and in that way the gain from the annulment of the value corrections in the sum of 12.3 million BAM will be made.

This gain belongs to all the shareholders equally to their participation in the capital.

BASIC RISKS AND THREATS

- Participation of the low-quality assets whose growth was stopped and the coverage was increased by the reserve corrections
- Macro economic challenges economic and political surrounding (need for the recapitalization for the growth of the macroeconomic risks; this procedure is for the reason of the overall situation applied in many world banks)
- Media campaign which is led against the Bank negatively influenced the assets, which dropped by more than 20% no matter of the recovery

• Strenghtening of the capital base and dispersion of the structure of the shareholder capital

PAVLOVIĆ INTERNATIONAL BANK

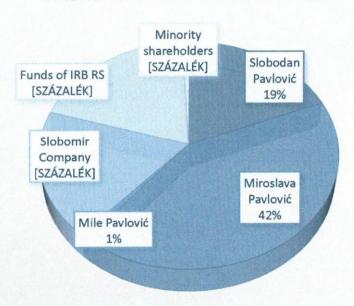

- "Clean start" <u>new cycle of growth and development</u> of the Bank due to its stabilization with the fresh capital (the planned average annual growth of the placements at the level of 10% in the period from 2017 – 2020)
- <u>Servicing of the loan portfolio</u> loan process and payment system is significantly advanced by the introduction and development of the Sector for Risks and Restructuration
- Orientation to the so called <u>retail banking</u> by which the greater risk dispersion and higher profitability is reached (farmers, population, entrepreneurs, small and medium-size enterprises)
- Diversification of the deposit portfolio

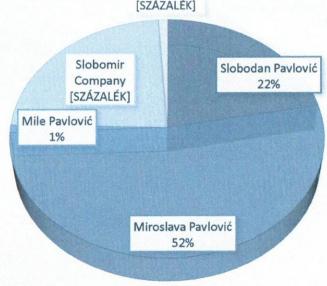

SHAREHOLDER STRUCTURE

Current property structure (condition 31st March 2018):

BASED ON THE BASIC CAPITAL

BASED ON THE VOTING RIGHT [SZÁZALÉK]

- Total basic capital: 25.744.179 BAM
- Priority shares without the voting right: 6.000.000 BAM
- Regular shares with the voting right: 19.744.179 BAM

- Future <u>profitability</u>; expected productivity is greater than the other alternative options
- Banking is the branch which has <u>high barriers</u> for the entrance, which significantly complicates the access (capital census for the bank foundation is 15 mil BAM with great start-up investments); <u>by recapitalization/takeover</u> of the existing subject makes it <u>easier</u> to accomplish the stated <u>entrance in the branch</u>
- <u>Diversification</u> of the own investments and the financial sector
- Advancement of the own business through directing the business partners (buyers and suppliers) for the work via "own" bank

CONCLUSION

- The Bank owns <u>great potential</u>, especially at the <u>local</u> <u>market</u> (Semberija), where it has been recognized as a domestic institution with trust
- <u>Chance</u> for <u>the entrance to the banking industry</u> as a prestige branch (without great investments and complicated procedures); The Bank has <u>the developed</u> <u>infrastructure and business network</u>
- The existing regular banking <u>risks</u> can be <u>held in the</u> <u>regulatory frames by the recapitalisation</u>
- <u>Recapitalisation</u> of the Bank strengthens the grounds for <u>the realization of the profit aims</u>
- More shareholders who participate in making decisions contributes to the better management

THANK YOU FOR YOUR ATTENTION!!!
