

AGROKÉMIA
selye

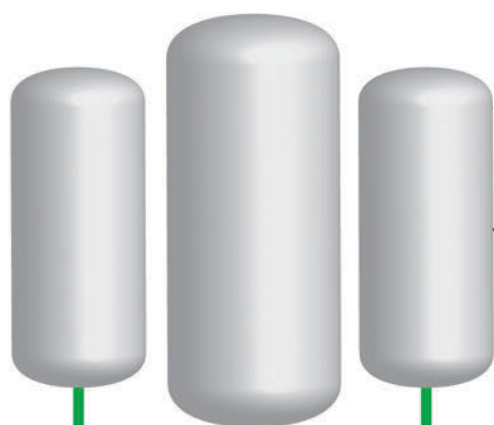

Agrokémia Sellye is one of the leading Hungarian custom manufacturers of crop protection products. Our main activities involve the synthesis of active substances, formulation, packaging services, and warehousing of a wide range of herbicides, fungicides, insecticides, rodenticides, adjuvants and fertilizers. Agrokémia Sellye is modern, ISO9001 certified enterprise, which is offering full range of smart and flexible services in order to manufacture high quality products for our customers.

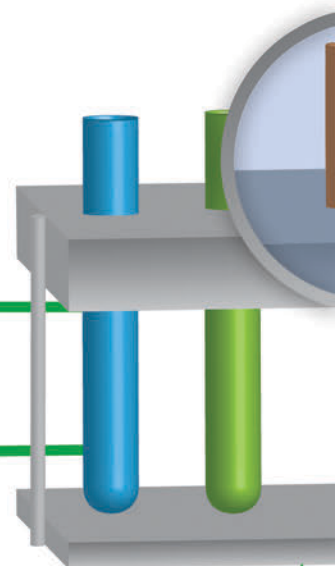

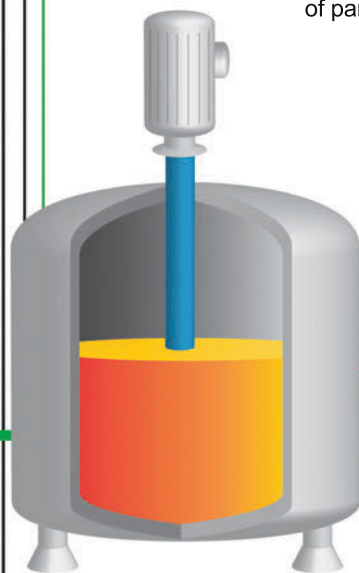

Tradition since 1964

Custom manufacturer of high quality crop protection products

production

In 2011, due to a major investment project, our production facilities have been completely modernized, with installing new equipment and instrumentation of the tanks with load cells and temperature transmitters. The factory has 4 separate production lines. Each line is hosting the manufacturing of particular type of agrochemical products: herbicides, fungicides, insecticides and rodenticides.

quality control

The real-time production control and raw materials control measurements are essential parts of our quality management system. The physical and chemical properties are being measured according to CIPAC methods. Using of the sophisticated and modern analytical tools ensure the exact determination of active ingredients' content, for example HPLC technique is our preferred procedure in chemical assay measurement, while laser diffraction method is being applied for particle size distribution determination. We place high emphasis on analysing and sampling of materials at all stages of manufacturing process.

capacity

Water-based formulations
SL, SC, SE, EW, FS, ME
16 000 l / shift

SL, EW
40 000 l / shift

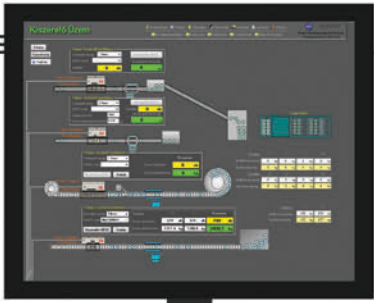

Solvent-based formulations
EC, OD, UL
40 000 l / shift

Agrokémia Sellye certified by

WE ARE AIMING AT DEVELOPING AND PRODUCING PRODUCTS, WHICH FULLY SATISFY THE DEMANDS AND NEEDS OF TODAY'S FARMERS.

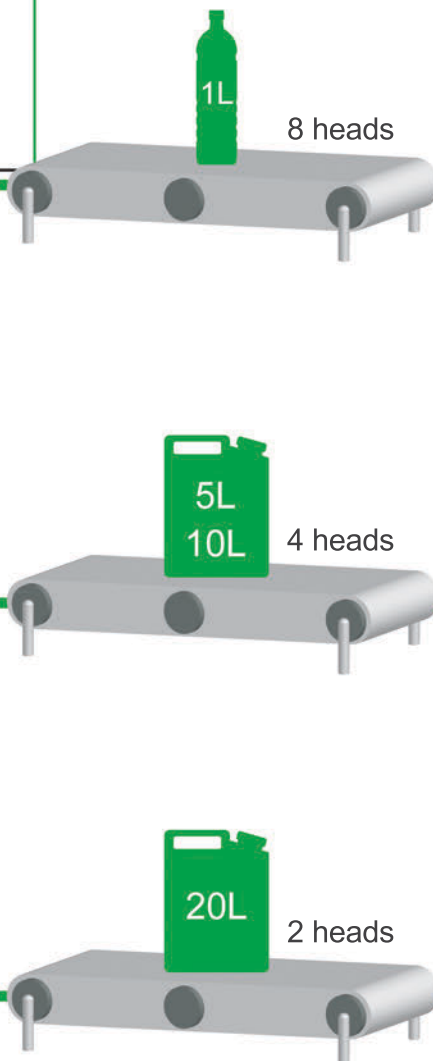

real time monitoring

A computer-based monitoring system has been installed for making each process visible, for recording and archiving all relevant production data, batch tracking with receipt logging, stock management and reporting.

packaging

The packaging unit is equipped with automated multihead filling lines (accuracy up to 1g) capable of labelling, packaging and palletizing.

warehouse

Our storage capacities include 4000 m² of newly built warehouse and tanks for handling 800 m³ of liquid materials in compliance with all requirements applicable for safety storage of agrochemicals.

Brand-new plant with automatic integrated computer systems

Custom manufacturing: tolling, turn-key services

Custom packaging and storage services

Accumulated R&D experience since 1964

PRODUCTION OF
Water-based formulations [SL, SC, SE, EW, FS, ME]
Solvent-based formulations [EC, OD, UL]

Our manufacturing services also cover:

Recipe development and optimization

Purchasing of raw materials

QA/QC services

Packaging & labelling

Storage & logistic services
